Judge Feedback & Novelty Ideas

this is my pipeline. now i need to add some novelty. the judge during mid eval said something like during the website is running a model runs on the camera feed to capture mood or capture attention (like for dwell time maybe user left it open and left so what was actual dwell time? for scroll through percentage you're not considering article length etc. etc.) or like if a user is in india u give them news from india but if tomorrow they go to UK what news do u give or like if location keeps changing so if they are in a car it can give voice over and interact w user over voice. and then it needs to be deployed and dockerized also.

also said ki koi bhi team deep rl nahi laga rhi... bring me something new mtlb PPO lagado. we said ki pehle wahi kar rhe the but GPU pe too much time. he said ki low accuracy par hi le ao. "ek tab LinUCB wala with more accuracy dikhado, ek dusra tab PPO wala with low accuracy dikhado. bandits outdated ho gaye"

point to be noted - users meine simulate karke banaye hai

basically some novelty

something fancy that LOOKS good

please suggest something unhone to kaafi hi confuse kar diya
